

Farmdale Reservoir Grant – Illinois

AERC Trails Grant, completed in 2010

Shows one of the three water trucks that have been borrowed and used to supply water for horses in camp and at vet checks for endurance and competitive trail rides. Ride office is in pop-up camper in background, and primitive camping is in field behind the row of trees behind the ride office. Photo is taken from vet check area.

In the background is one of the water trucks in the primitive campground area, along with porta-potties.

Shows vet check. Army Corps of Engineer Maintenance Shed is up the paved road going up the hill in the background, and is on the other side of the road at the top of this small hill. The plan is to trench to run a water supply line from the well at Maintenance Shed along the far side of road down the hill, and then go under the road to the low fence on the left of the picture, which is the end of the parking lot. Water hydrant will be placed beside this parking lot fence.

Another view of the parking lot and fence where water hydrant will be located; park ranger taking a ride in driving cart.

Ride office in pop-up camper.
